

Instructions

Measuring

Supplies needed:

- ☐ Window Measurement Tracking Sheet
 - ☐ Template for measurement
 - ☐ Scissors for cutting out the template
 - ☐ Masking tape
 - ☐ Tape measure
 - ☐ Pencil/pen
- ▶ Give each of your windows a descriptive name and record them on your Window Measurement Tracking Sheet.
 - ▶ Print and cut out the four templates.
(Color printing is helpful, but not required.)
 - ▶ Using the top left template, align it with the top left corner of your window, outside the frame and secure it using masking tape.
It's okay if the curve doesn't match, just ensure the "arms" of the template rest against the top and side of your window frame.
 - ▶ Repeat for the other three corners.

Note

*The base for the turn-button is drawn next to the red dot.
If the base will not fit beneath your valence,
Turn Buttons will not work for your RV.
Please choose a different method of attachment.*

- ▶ Measure across the top from red dot to red dot, shown by the green arrow.
IMPORTANT: Round up to the nearest inch.
Write this number down on your tracking sheet as the width.
- ▶ Measure down the side from point to point, shown by the green arrow.
IMPORTANT: Round up to the nearest inch.
Write this number down on your tracking sheet as the length.
- ▶ Repeat for the remaining windows.

Need help? Contact Roaming Shades at info@roamingshades.com.

Start with the window to the right of your door. Work your way around in a clockwise direction.

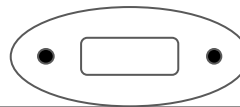

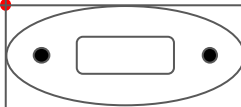

- Give each window a description, such as "Bedroom Left."
- Width is measured across the top.
- Height is measured top to bottom.
- Round to the nearest in
- Keep this page to make matching shades easier
